

<b>DAY 0</b>		<b>Theme: data inspection</b>		
<b>Day 29 april (119)</b>				
<b>Ewout/John</b>				
<b>Seq</b>	<b>Local time</b>	<b>Activity</b>	<b>Comment</b>	
	10:30	Inspecting images for hot and cold feaures	Ewout has drawing in "notebook"	
	12:00	Training with BoB and checking our OB files	<a href="mailto:ocam@wocam">ocam@wocam</a> , Bnice2me, root4u / data/OMEGACAM/INS_ROOT/SYSTEM/COMMON/TEMPLATES/OBD/OCAM1B	
		Considering lamp glitches	No partially illuminated exposures seen. The lamps must have spontaneously turned of between two adjacent exposures, then back on in the same way between two different adjacent exposures.	
		Inspecting cross talk features	ccd 96 has a ~30% higher bias level than ccd 95. It appears that cross talk features from 96 are positive in 95 and from 95 afre negative in 96. The features appear to be absent in multi-read Focus exposures.
